Suppl. Table 4. Difference between Chinese and European (CN – EU) populations in parameters of genetic diversity and informativeness for individual marker loci. Number of alleles per locus ( $N_a$ ), polymorphism information content (PIC), expected heterozygosity ( $H_e$ ), observed heterozygosity ( $H_o$ ), probability of identity-unrelated (PI), probability of identity related (Plsibs), Shannon's Information Index (I), Major Allele Frequency (MAF), Gene Diversity (GD). Column-wise color-coding for highlighting CN-EU differences.

Locus	Chr	$N_a$	PIC	$H_e$	$H_o$	PI	Plsibs	I	MAF	GD
